

The History of Science

Written and read by **Peter Whitfield**

*This is the foundation of all: that we are not to imagine or suppose, but to **discover** what nature does, or may be made to do.*

Thus did Francis Bacon, early in the 17th century, outline the future of science and technology. This drive for knowledge and power has now given us a world dominated by science, and this audiobook tells the story of how we have arrived there. The achievements of the great scientific thinkers of the ages – Copernicus, Newton, Lavoisier, Darwin, Pasteur, Einstein, Freud, Hubble and many more – are explained and woven together into an exciting story of intellectual discovery, but a story in which a sense of the mystery of the universe is always present.

Peter Whitfield is an historian and a poet. His books include *A Universe of Books: Readings in World Literature*. He has also written and read *Darwin – In a Nutshell* and *The Renaissance – In a Nutshell*, and written *The History of English Poetry*, all for Naxos AudioBooks.
